MACHINERY FLEET 2020

OSSA, a leading company in the underground works sector, was founded in Spain in 1952 as a family firm engaged in mining.

Thanks to over 65 years of continuous specialisation and innovation, OSSA has gained international standing in the design and construction of extremely complex underground projects. We manage all types of projects, even those where the geology is adverse, the location is remote or the conditions are harsh. Our performance excellence, efficiency and the quality of our projects are world-renowned. The company has a presence in over 17 countries today and is established in, among others, Chile, Peru, Colombia, Panama, Costa Rica, Guatemala, México and Israel.

OSSA has gained experience in highly varied works typologies and specialises in all types of underground works. OSSA has completed over 920 km of tunnels, 75 km of shafts, and 800,000 m³ of caverns. We use all underground excavation techniques, in particular the New Austrian Tunnelling Method, whether the drill & blast method or the mechanical method, or the use of TBM equipment.

OSSA owns a large fleet of specialised underground work machinery, enabling us to rapidly respond and guarantee execution deadlines of all ongoing projects.

OSSA, over 65 years shaping pathways underground.
